Subject: Clean Up and Clean Energy!

Dear

Dear Mr. Plieness:

Millions of dollars have already been spent cleaning up from the "boom" of the 50's & 60's. Please do not trash out our state again! We need CLEAN energy!
I live in Montrose County, just over the hill from the proposed mill! I do not want this in our state much less just over the hill! There is little need for uranium production in this country, we have plenty!

I am writing to voice my concerns regarding the Department of Energy's (DOE) Uranium Leasing Program (ULP) and its recent Programmatic Environmental Impact Statement (PEIS).

The ULP covers roughly 25,000 acres of public lands across western Colorado, and future uranium development should only be done in a manner that protects public health, safety and welfare. The current PEIS is inadequate and it needs to expand its alternatives, bolster impact analyses, support renewable energy, and protect long-term public interest. For DOE to usher a process that results in the best choice, any analysis should also address bonding, royalty rates, uniform and holistic standards for mine reclamation, and uranium market conditions.

Under DOE's preferred alternative, scores of existing leases could operate alongside 19 new mines during peak operations. Instead, DOE should substantively consider a "Clean Alternative", one that prioritizes mine reclamation and safer energy alternatives. Western Colorado has thousands of un-reclaimed uranium mines and at the same time is renowned for its solar energy potential. DOE should put people back to work cleaning-up old mines and developing sustainable, renewable energy economies.

In order for future DOE uranium development to be done safely, impact analyses must include a thorough programmatic review alongside in-depth, localized information. Western Colorado has already carried the disproportionate burdens of an industry that left behind a legacy of waste and radioactive contamination. The PEIS lacks a detailed cumulative impacts study, excluding investigation of long-term economic development, transportation corridors, and public health; in general failing to consider the combined impacts of all past and present uranium activities in this region.

The ULP runs across Mesa, Montrose and San Miguel Counties; it will inherently have regional implications on our economy, environment and public health. The PEIS states only "minor" environmental justice concerns are associated with increased uranium mining in this area. Yet, our communities would again become dependent on a boom & bust market and face unavoidable environmental and land use degradation for private companies to profit.

I believe DOE can offer a program that supports promising sustainable jobs without increased uranium mining. The DOE should contribute to our local economies by putting people back to work reclaiming old mines and developing renewable energy. Every Coloradan has the right to a clean environment, a strong economy and a healthy community.

Sincerely,
Rad Radley
