Welcome to the NDIS Wildlife page. Currently, NDIS tracks 748 animal species! When available, a species' life history text, a photo, maps and a listing status are provided.

The only Colorado species that are not tracked are "accidental" occurrences or species that are considered "extinct". Sub-species are not included either unless they are listed in some way (i.e. Greenback Cutthroat Trout is on the Federal and State Threatened list).

Use the links to the left to locate a species or enter a portion the species common or scientific name in the following Search Tool. After your search results are returned, simply click on a **Species Name** to jump right to that page.

**Search for species:**

|                      |                      |
|----------------------|----------------------|
| <input type="text"/> | <input type="text"/> |
| Common Name          | Scientific Name      |
