Cember, Herman.

Introduction to health physics.

Includes bibliographies.

1. Radiation--Safety measures. 2. Radiation--
Toxicology. 3. Environmental health. I. Title.

RA569.C4 1983 616.07'57'0288 82-19051

ISBN 0-08-030129-0

ISBN 0-08-030936-4 (pbk.)

Second printing 1985

Third printing 1987

Fourth printing 1988

Fifth printing, 1989

CONTENTS

PREFACE		xiii
CHAPTER 1. INTRODUCTION		1
CHAPTER 2. REVIEW OF PHYSICAL PRINCIPLES		2
Mechanics		2
Units and dimensions		2
Work and energy		3
Relativity effects		4
Electricity		9
Electrical charge: the coulomb		9
Electrical potential: the volt		11
The electron volt: a unit of energy		14
Electric field		16
Energy Transfer		20
Elastic collision		20
Inelastic collision		22
Waves		24
Electromagnetic waves		25
Impedance		31
Quantum Theory		33
Matter waves		35
Uncertainty principle		38
CHAPTER 3. ATOMIC AND NUCLEAR STRUCTURE		41
Atomic Structure		41
Rutherford's nuclear atom		41
Bohr's atomic model		42
Excitation and ionization		45
Modifications of the Bohr atom		47
Periodic table of the elements		48
Characteristic X-rays		51
The wave mechanics atomic model		52
The Nucleus		53
The neutron and nuclear force		53
Isotopes		53
The atomic mass unit		54
Binding energy		54
Nuclear models		56
Nuclear stability		57
CHAPTER 4. RADIOACTIVITY		60
Radioactivity and Transformation Mechanisms		60
Alpha emission		60
Beta emission		63
Positron emission		67
Orbital electron capture		68
Gamma rays		69
Internal conversion		70
Transformation Kinetics		71
Half-life		71
Average life		74

Activity	75
The becquerel	75
The curie	76
Specific activity	77
Naturally Occurring Radioactivity	79
Serial Transformation	87
CHAPTER 5. INTERACTION OF RADIATION WITH MATTER	97
Introduction	97
Beta-rays	97
Range-energy relationship	97
Mechanisms of energy loss	101
Ionization and excitation	101
Bremsstrahlung	106
Alpha-rays	107
Range-energy relationship	107
Energy transfer	108
Gamma-rays	109
Exponential absorption	109
Interaction mechanisms	114
Pair production	114
Compton scattering	115
Photoelectric absorption	119
Photodisintegration	119
Combined effects	120
Neutrons	120
Production	120
Classification	123
Interaction	125
Scattering	126
Absorption	128
Neutron activation	129
CHAPTER 6. RADIATION DOSIMETRY	135
Units	135
Absorbed dose	135
Exposure	136
Exposure measurement: the free air chamber	137
Exposure measurement: the air wall chamber	139
Exposure-dose relationship	142
Absorbed dose measurement: Bragg-Gray principle	144
Kerma	146
Source Strength: Specific Gamma-ray Emission	147
Internally Deposited Radioisotopes	149
Corpuscular radiation	149
Effective half-life	150
Total dose: dose commitment	151
Gamma emitters	153
MIRD method	156
Neutrons	172
CHAPTER 7. BIOLOGICAL EFFECTS OF RADIATION	177
Dose-response characteristics	177
Direct action	179
Indirect action	179
Radiation Effects	180
Acute effects	181
Blood changes	181
Hemopoietic syndrome	182
Gastrointestinal syndrome	183
Central nervous system syndrome	183
Other acute effects	183

CHAPTER 8

CHAPTER 9

CONTENTS

ix

75			
75		Delayed effects	184
76		Cancer	184
77		Leukemia	185
79		Bone cancer	186
87		Lung cancer	187
		Genetic effects	187
		Hazard and toxicity	189
97		Life shortening	193
97		Cataracts	194
97		Risk estimates: BEIR III	194
97		Relative Biological Effectiveness (RBE) and Quality Factor (QF)	196
101		Dose Equivalent: the Sievert (and the Rem)	197
101		High energy radiation	198
106			
107			
107	CHAPTER 8.	RADIATION PROTECTION GUIDES	200
108		Organizations that Set Standards	200
109		International Commission on Radiological Protection	200
109		International Atomic Energy Agency	200
114		International Labour Organization	200
114		International Commission on Radiological Units and Measurements	201
115		National Council on Radiation Protection and Measurements	201
119		Philosophy of Radiation Protection	201
119		Basic Radiation Safety Criteria	204
120		Effective dose-equivalent	204
120		Exposure of individuals in the general public	205
120		Exposure of populations	206
123		Medical exposure	206
125		Allowable limit on intake (ALI)	206
126		Inhaled radioactivity	210
128		Derived air concentration (DAC)	216
129		Gastrointestinal tract	217
		Combined exposure	225
		Basis for Radiation Safety Regulations	225
135		Calculation of MPC in drinking water based on dose to	
135		critical organ	227
135		Concentration in drinking water based on comparison with radium	229
136		Airborne radioactivity	231
137		Maximum permissible concentrations for non-occupational exposure	235
139			
142			
144	CHAPTER 9.	HEALTH PHYSICS INSTRUMENTATION	239
146		Radiation Detectors	239
147		Particle-counting Instruments	239
149		Gas-filled particle counters	239
149		Ionization chamber counter	240
150		Proportional counter	242
151		Geiger counter	243
153		Quenching a Geiger counter	244
156		Resolving time	245
172		Measurement of resolving time	246
		Scintillation counters	246
		Nuclear spectroscopy	249
177		Cerenkov detector	251
177		Semiconductor detector	252
179		Dose-measuring Instruments	254
179		Pocket dosimeters	255
180		Film badges	257
181		Thermoluminescent dosimeter	261
181		Ion current chamber	263
182		Neutron Measurements	266
183		Detection reactions	266
183		Neutron counting with a proportional counter	269
183		Long counter	270
183		Proton recoil counter	271

Neutron dosimetry	272
Fast neutrons: Hurst counter	273
Thermal and fast neutron dose-equivalent meter	274
Albedo neutron dosimeter	275
Calibration	277
Gamma-rays	277
Beta-rays	279
Alpha-rays	279
Neutrons	279
Accuracy	282
Counting Statistics	282
Distributions	282
Difference between means	286
Optimization of counting time	287
Weighted means	289
CHAPTER 10. EXTERNAL RADIATION PROTECTION	293
Basic Principles	293
Technics of external radiation protection	293
Time	293
Distance	294
Shielding	298
X-ray shielding	303
Beta ray shielding	318
Neutron shielding	320
CHAPTER 11. INTERNAL RADIATION PROTECTION	326
Internal Radiation Hazard	326
Principles of Control	326
Control of the source: confinement	327
Environmental control	329
Control of man: protective clothing	331
Control of man: respiratory protection	332
Surface Contamination Limits	332
Waste Management	334
High level liquid wastes	336
Intermediate and low level liquid wastes	338
Airborne wastes	339
Meteorological considerations	340
Dispersion of gas from a continuous source	347
Solid wastes	352
Assessment of Hazard	355
CHAPTER 12. CRITICALITY	364
Criticality Hazard	364
Nuclear Fission	364
Fission Products	367
Criticality	369
Multiplication factor: four factor formula	369
Nuclear Reactor	374
Reactivity and reactor control	375
Fission product inventory	377
Criticality Control	381
CHAPTER 13. EVALUATION OF PROTECTIVE MEASURES	385
Medical Surveillance	385
Estimation of Internally Deposited Radioactivity	386
Personnel Monitoring	390
Radiation and Contamination Surveys	391
Choosing a health physics instrument	391
Surface contamination	393
Leak testing sealed sources	394
