## CONTENTS

	Paragraph
Preface	1
1. Introduction	3
1.1. The history of the Commission	3
1.2. The development of the Commission's recommendations	6
1.3. The aims of this report	10
1.4. The scope of the Commission's recommendations	13
2. Quantities Used in Radiological Protection	17
2.1. Introduction	17
2.2. Basic dosimetric quantities	22
2.2.1. Radiation weighting factors	23
2.2.2. Equivalent dose	24
2.2.3. Tissue weighting factors and effective dose	27
2.3. Subsidiary dosimetric quantities	33
2.4. Other quantities	37
3. Biological Aspects of Radiological Protection	42
3.1. Introduction	42
3.2. The biological effects of ionising radiation	44
3.3. The concept of detriment	47
3.4. Quantitative estimates of the consequences of radiation exposures	52
3.4.1. Deterministic effects	54
3.4.2. Stochastic effects in exposed individuals	62
3.4.3. Stochastic effects in progeny	87
3.4.4. Effects of antenatal exposure	90
3.5. Tissue weighting factors	94
4. The Conceptual Framework of Radiological Protection	99
4.1. The basic framework	99
4.2. The system of radiological protection	112
4.3. Radiological protection in proposed and continuing practices	115
4.3.1. The justification of a practice	115
4.3.2. The optimisation of protection	117
4.3.3. Individual dose limits	122
4.3.4. Potential exposures	127
4.4. Radiological protection by intervention	130
4.5. The assessment of the effectiveness of a system of protection	132
5. The System of Protection for Proposed and Continuing Practices	133
5.1. Types of exposure	134
5.1.1. Occupational exposure	134
5.1.2. Medical exposure	139
5.1.3. Public exposure	140
5.2. The application of the system of protection	141

RA1231  
 .R26155  
 100.60

5.3. The system of protection in occupational exposure	144
5.3.1. The optimisation of protection in occupational exposure	144
5.3.2. Dose limits in occupational exposure	147
5.3.3. The occupational exposure of women	176
5.4. The system of protection in medical exposure	179
5.4.1. The justification of a practice in medical exposure	179
5.4.2. The optimisation of protection in medical exposure	180
5.4.3. Dose limits in medical exposure	182
5.4.4. Medical exposure of pregnant women	184
5.5. The system of protection in public exposure	185
5.5.1. The optimisation of protection in public exposure	186
5.5.2. Dose limits in public exposure	188
5.6. Potential exposures	195
5.6.1. Justification of a practice	202
5.6.2. The optimisation of protection	203
5.6.3. Individual risk limits and constraints	204
5.7. Interactive situations	207
6. The System of Protection in Intervention	210
6.1. The basis of intervention in public exposure	211
6.2. Situations in which remedial action may be needed	215
6.2.1. Radon in dwellings	216
6.2.2. Radioactive residues from previous events	219
6.3. Accidents and emergencies	220
6.3.1. Intervention affecting the public	220
6.3.2. The limitation of occupational exposure in emergencies	224
7. Implementation of the Commission's Recommendations	226
7.1. Responsibility and authority	230
7.2. The recommendations of the Commission	234
7.3. Regulatory requirements	236
7.3.1. The regulation of practices	238
7.3.2. Regulation in the context of potential exposures	244
7.4. Management requirements	247
7.4.1. The classification of workplaces and working conditions	251
7.4.2. Operational guides	254
7.4.3. Reference levels	257
7.4.4. Occupational services for protection and health	258
7.5. The assessment of doses	264
7.5.1. Dosimetry in occupational exposure	266
7.5.2. Dosimetry in medical exposure	272
7.5.3. Dosimetry in public exposure	273
7.6. Compliance with the intended standard of protection	276
7.6.1. Record keeping	277
7.7. Emergency planning	278
7.8. Exclusion and exemption from regulatory control	285
